

How IN & OUT works

Very simple. Two actions only:

IN

Check In

Put your finger when you
START work.

OUT

Check Out

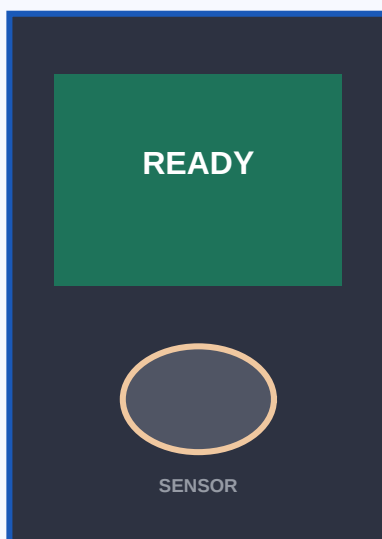

Put your finger when you
FINISH work.

Same finger. Same device. System decides IN or OUT.

You do not press any IN / OUT button.

Step 1 - Place finger

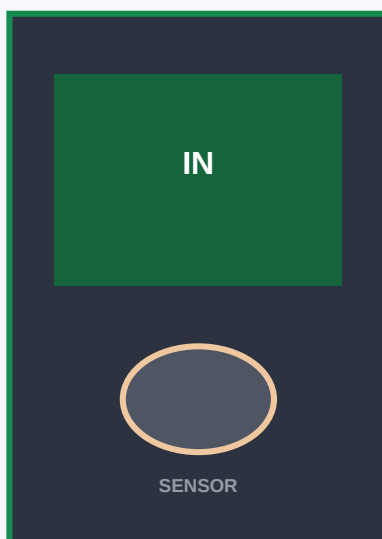

1. Stand at the device
2. Place your enrolled finger on the sensor

Hold steady for 1-2 seconds.

Step 2 - First punch = IN

First successful scan of the day -> CHECK IN

Screen shows you are IN (started work).

Your attendance is saved on the server.

Step 3 - Work as usual

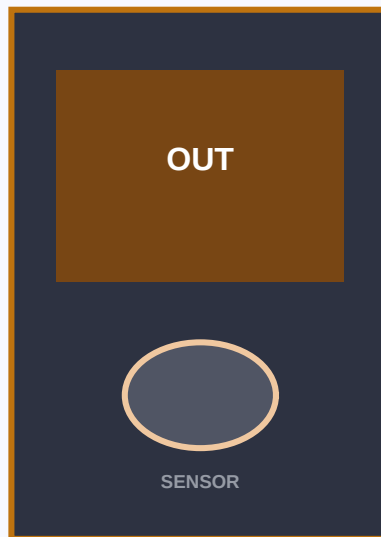

You are IN

Continue your work.

No need to touch the device again
until you leave.

Step 4 - Second punch = OUT

Next successful scan -> CHECK OUT

Place the same finger again when you finish work.

Screen shows you are OUT (ended work).

Remember

- 1 Same finger for IN and OUT
- 2 First scan = IN | Next scan = OUT
- 3 Hold finger steady on the sensor
- 4 Wait for success message on screen
- 5 Use the device at your site (office / factory)

That is all - IN when you start, OUT when you finish.
